Human adenine nucleotide translocator ANT2 cDNA.

adenine nucleotide translocator; ANT2; mitochondria; ADP; ATP;

```
(ANT) proteins of ANT fusion proteins using recombinant expression constructs. ANT is a nuclear encoded protein and a major component of inner mitochondrial membrane. It mediates transport of adenosine di/tri-phosphates across the mitochondrial inner membrane and also serves as an important molecular component of the mitochondrial permeability transition pore, a modulator of apoptosis. ANT is used to identify agents or ligands that bind to, or interact with it. The ANT ligands are used to detect or isolate ANT in a biological sample, and therapeutically for regulating mitochondrial pore activity, for treating diseases associated with altered mitochondrial function, including Alzheimer's, Parkinson's and Huntington's diseases, cancer, psoriasis, diabetes, dystonia, Leber's hereditary optic neuropathy, schizophrenia, mitochondrial diabetes and definess (MIDD), and myoclonic delectors, mitochondrial diabetes and definess (MIDD), and myoclonic depilepsy red ragged fibre syndrome. The present sequence is a CDNA encoding adenine nucleotide translocator ANT2 from human brain.

                                                                                                                                                 밁
                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes for human adenine nucleotide translocator-2 (C (ANT-2) protein. ANT proteins are mitochondrial permeability transport ctransition (MTP) pore components responsible for mediating transport cof ADP across the mitochondrial inner membrane. ANT proteins interact with other mitochondrial core components e.g. cyclophilins to creat components responsible for mediating transport creating the MPT. The present invention relates to a novel nucleic acid components e.g. cyclophilins to core components e.g. cyclophilins to component protein nucleic acid components of the method are useful fore component polypeptide (c e.g. ANT) fused to an energy transfer molecule (ETM) protein (e.g. ANT) fused to an energy transfer molecule (ETM) protein (c e.g. aNT) fused to an energy transfer molecule (ETM) protein (c e.g. aNT) fused to an energy transfer molecule (ETM) protein (c e.g. aNT) fused to an energy transfer molecule (ETM) protein (c e.g. aNT) fused to an energy transfer molecule (ETM) protein core components of luorescent protein (GPP) or a FLASH sequence). The novel c expression construct can alter mitochondrial membrane permeability c transition and/or alter the interaction between mitochondrial core components. The methods are useful for screening for agents that alter C mPT and/or cell survival. These agents are useful for the prevention or c treatment of diseases associated with altered mitochondrial function or c dysfunctional cell survival, such as Alzheimer's disease, schizophrenia, c mitochondrial encephalopathy, lactic acidosis, stroke, c mitochondrial encephalopathy, lactic acidosis, stroke,

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LINI at: http://image.linl.gov Serles: IRAK Plate: 13 Row: e Column: 10
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA g1: 3820534
This clone has the following problem: no 5' EST match.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Web site: http://www.hgsc.bcm.tmc.edu/cdna/

Sequence 9, Application US/08961871 Patent No. 6013858 GENERAL INFORMATION:
APPLICANT: Mallace, Douglas C.
APPLICANT: Graham, Brett H.
APPLICANT: MacGregor, Grant R.
TITLE OF INVENTION: Mouse Lacking Heart-Muscle Adenine
TITLE OF INVENTION: Nucleotide Translocator Protein and Methods
NUMBER OF SEQUENCES: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GCCAGCAAGCAGATCGCCGCCGACAAGCAGTACAAGGGCATCGTGGACTGCATTGTCCGC 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TACTTCCCCACTCAAGCCCTCAACTTCGCCTTCAAGGATAAGTACAAGCAGATCTTCCTG
